IRIS Custom Policy

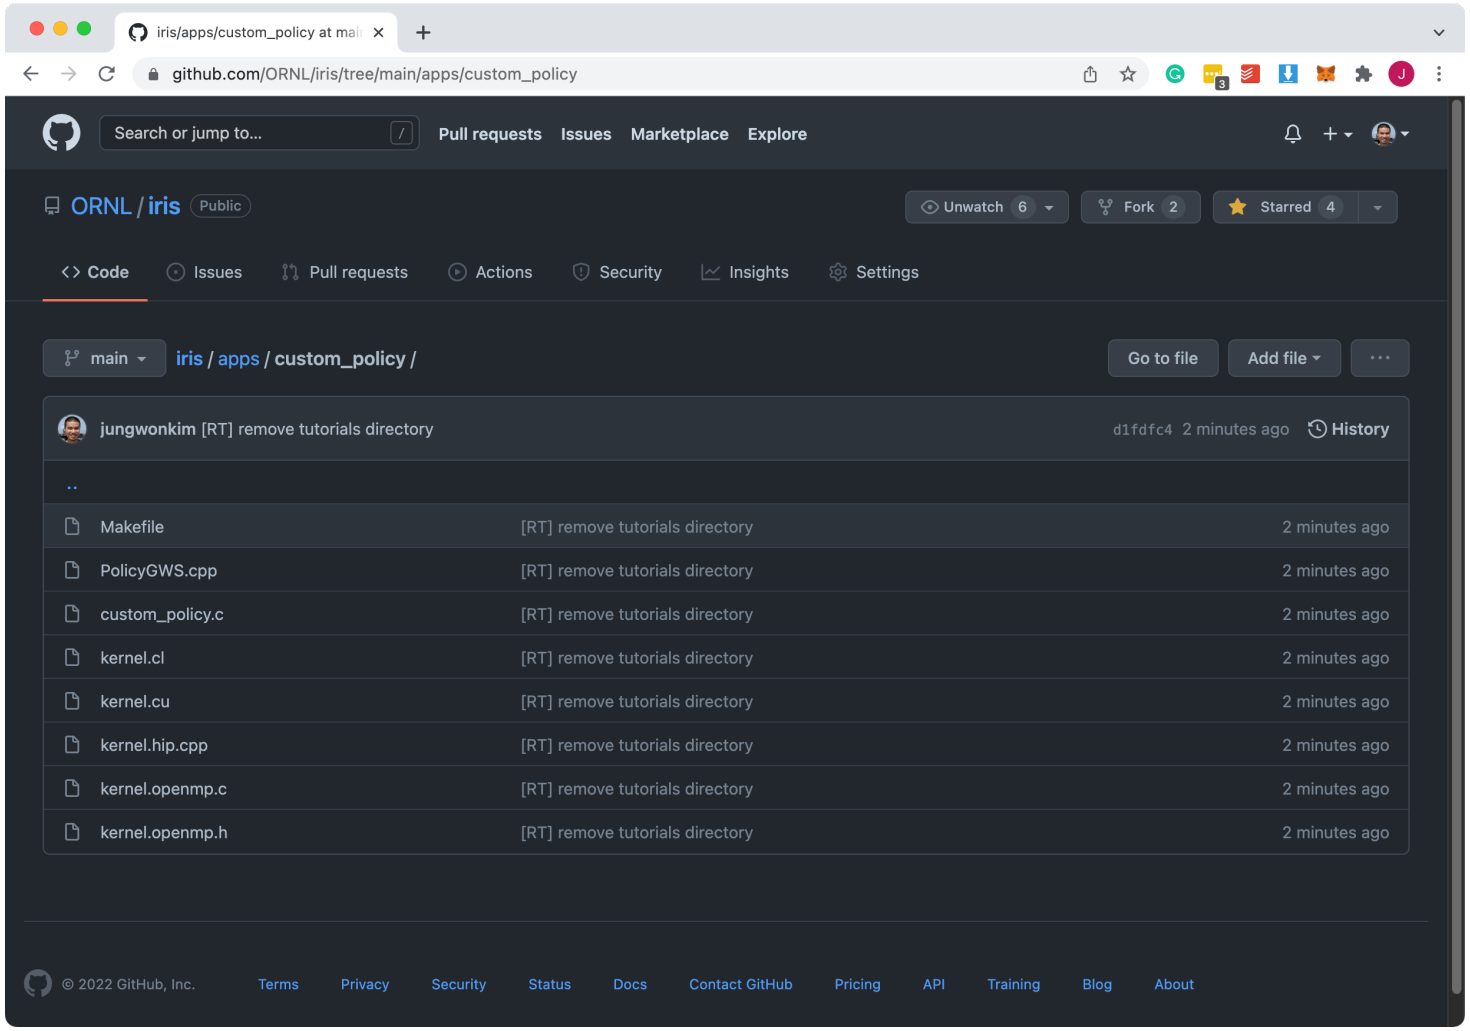
Jungwon Kim

IRIS mini workshop 2022

January 5, 2022

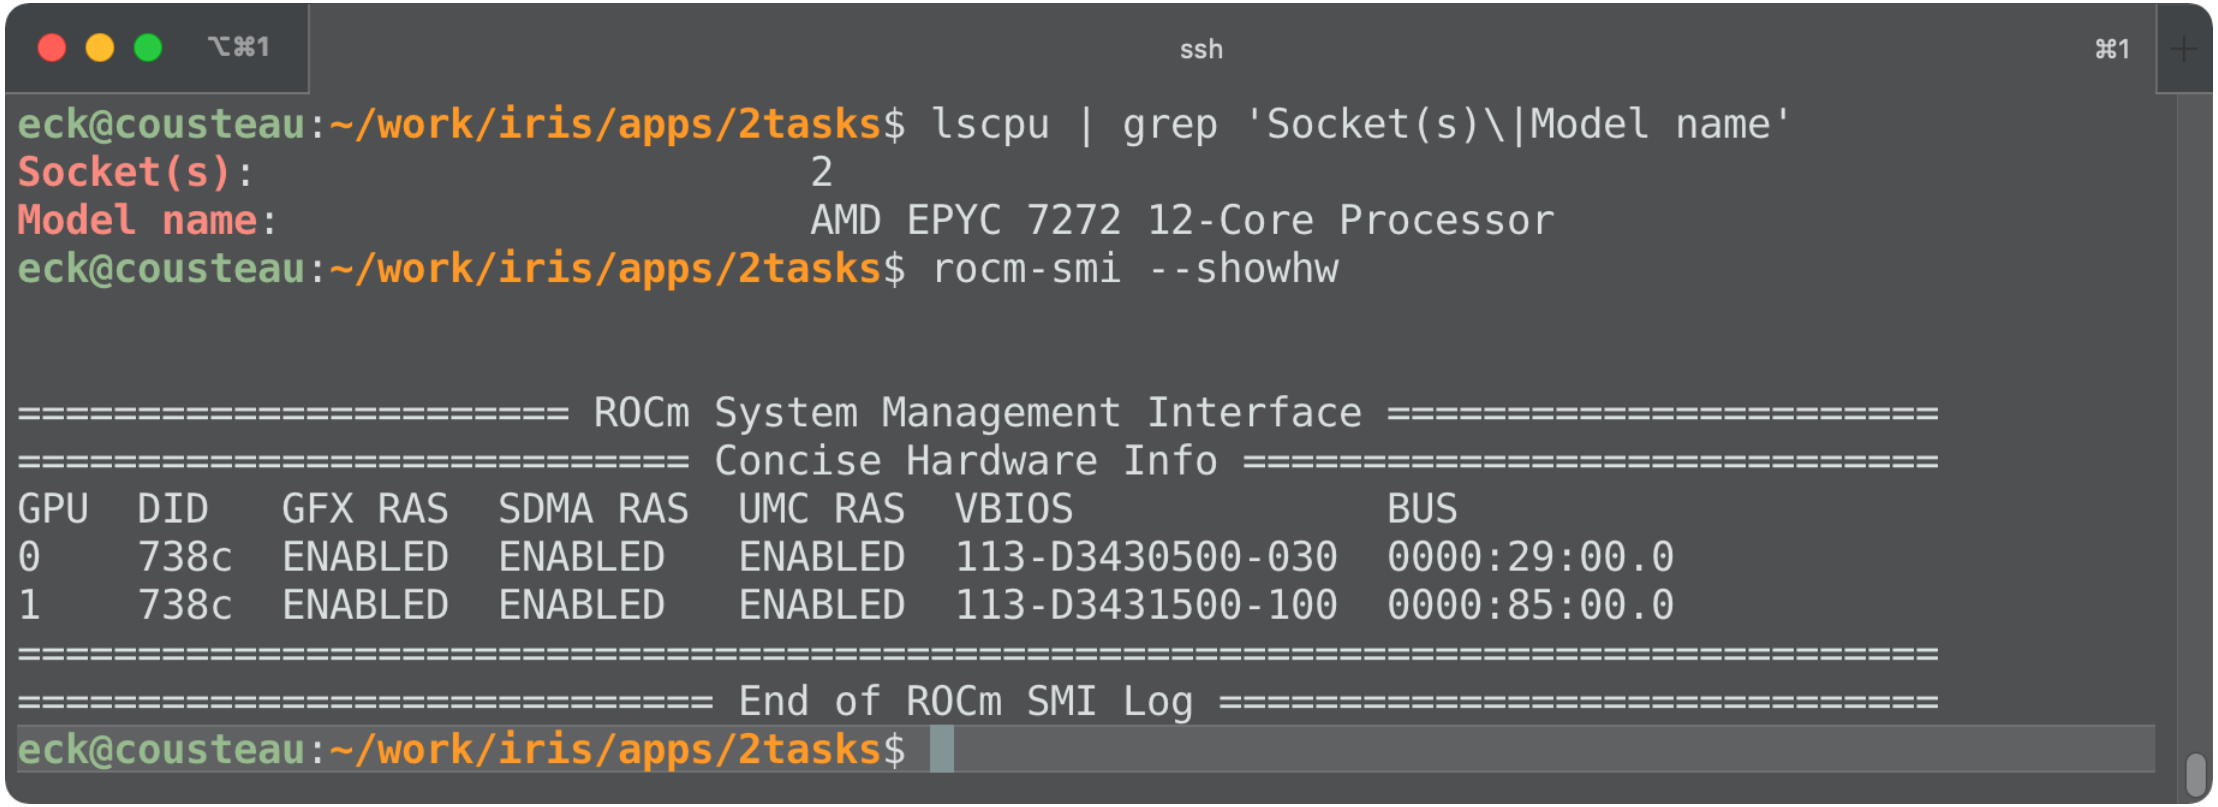
Application: tutorials/custom_policy

- https://github.com/ORNL/iris/tree/main/apps/custom_policy



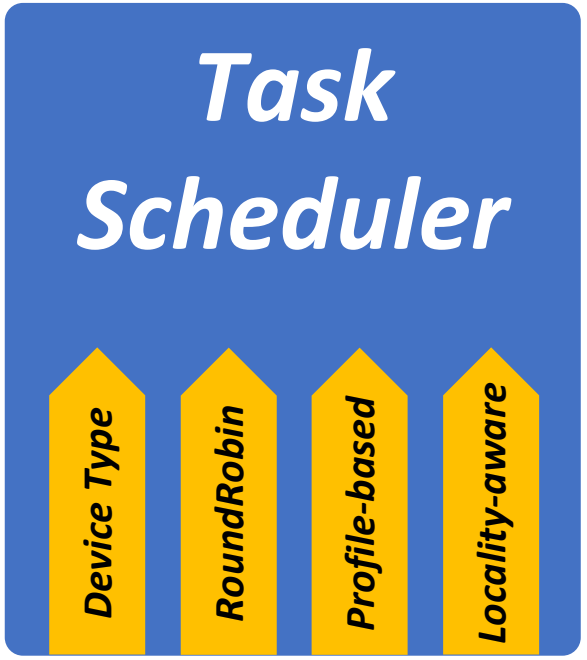
Machine: ExCL/Cousteau

- 2x AMD EPYC 7272 CPUs + 2x AMD MI100 GPUs



IRIS: *Intelligent* Runtime System

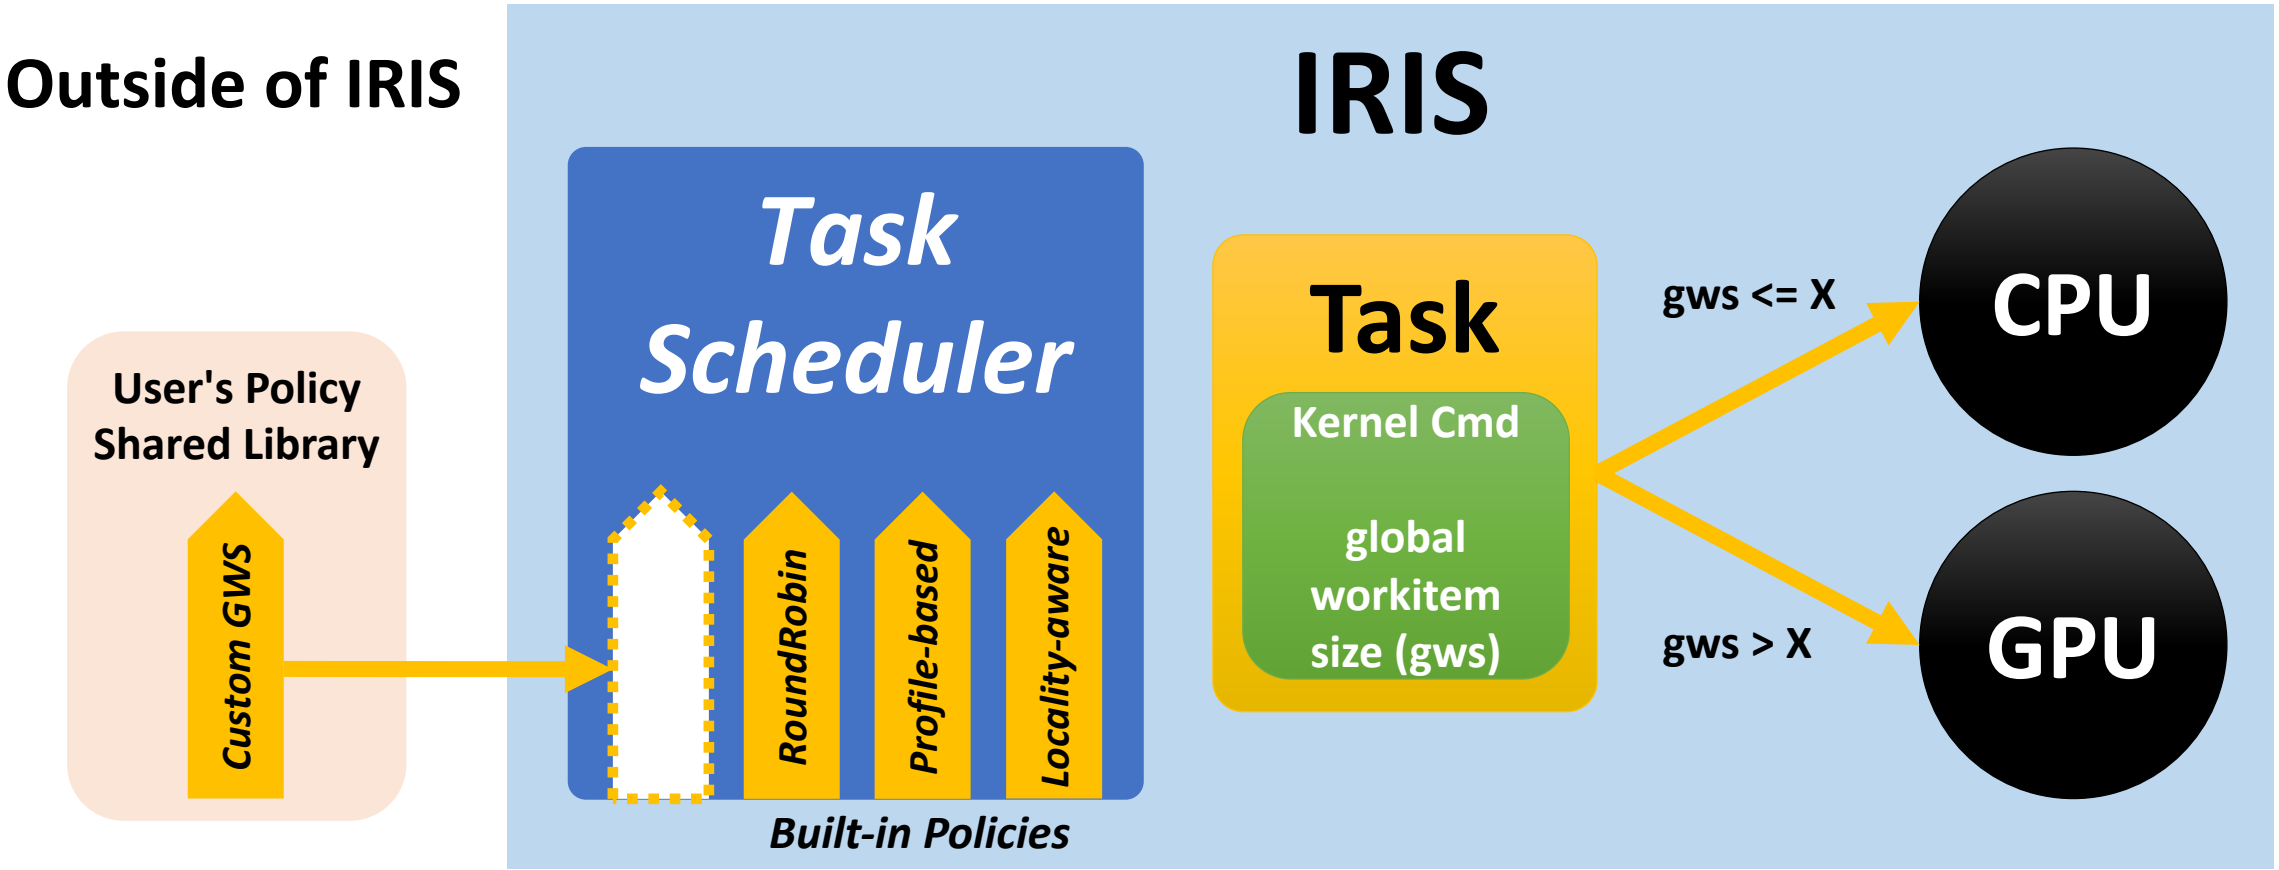
- IRIS can provide intelligent policies
  - Device selection policies
  - Kernel selection policies



Built-in Device Selection Policies

Pluginable Custom Policies

- Users can write their own device selection policies and plug them in IRIS at run time



custom_policy/PolicyGWS.cpp

- Implement a new subclass of Policy
  - Two virtual functions: Init(), GetDevices()
- Call REGISTER_CUSTOM_POLICY(class_name, policy_name)
- Build a shared library
  - g++ -std=c++11 -fPIC -shared -o **libPolicyGWS.so** PolicyGWS.cpp

src/runtime/Scheduler.cpp

PolicyGWS.cpp

```cpp
#include <iris/iris.h>
#include <iris/rt/Policy.h>
#include <iris/rt/Command.h>
#include <iris/rt/Device.h>
#include <iris/rt/Task.h>

namespace brisbane {
namespace rt {

class PolicyGWS: public Policy {
public:
  PolicyGWS() {}
  virtual ~PolicyGWS() {}
  virtual void Init(void* params) {
    threshold_ = (size_t) params;
  }
  virtual void GetDevices(Task* task, Device** devs, int* ndevs) {
    Command* cmd = task->cmd_kernel();
    size_t* gws = cmd->gws();
    size_t total_work_items = gws[0] * gws[1] * gws[2];
    int target_dev = total_work_items > threshold_ ? iris_gpu : iris_cpu;
    int devid = 0;
    for (int i = 0; i < ndevices(); i++)
      if (device(i)->type() & target_dev) devs[devid++] = device(i);
    *ndevs = devid;
  }

  size_t threshold_;
};

} /* namespace runtime */
} /* namespace brisbane */

REGISTER_CUSTOM_POLICY(PolicyGWS, custom_gws)
```

Scheduler.cpp

```cpp
  if (task->marker()) {
    std::vector<Task*>* subtasks = task->subtasks();
    for (std::vector<Task*>::iterator I = subtasks->begin(), E = subtasks->end(); I != E; ++I) {
      Task* subtask = *I;
      int dev = subtask->devno();
      workers_[dev]->Enqueue(subtask);
    }
    return;
  }
  if (!task->HasSubtasks()) {
    SubmitTask(task);
    return;
  }
  std::vector<Task*>* subtasks = task->subtasks();
  for (std::vector<Task*>::iterator I = subtasks->begin(), E = subtasks->end(); I != E; ++I)
    SubmitTask(*I);
}

void Scheduler::SubmitTask(Task* task) {
  int brs_policy = task->brs_policy();
  char* opt = task->opt();
  int ndevs = 0;
  Device* devs[BRISBANE_MAX_NDEVS];
  if (brs_policy < BRISBANE_MAX_NDEVS) {
    if (brs_policy >= ndevs_) ndevs = 0;
    else {
      ndevs = 1;
      devs[0] = devs_[brs_policy];
    }
  } else policies_->GetPolicy(brs_policy, opt)->GetDevices(task, devs, &ndevs);
  if (ndevs == 0) {
    int dev_default = platform_->device_default();
    _trace("no device for policy[0x%x], run the task on device[%d]", brs_policy, dev_default);
    ndevs = 1;
    devs[0] = devs_[dev_default];
  }
  for (int i = 0; i < ndevs; i++) {
    devs[i]->worker()->Enqueue(task);
    if (hub_available_) hub_client_->TaskInc(devs[i]->devno(), 1);
  }
}

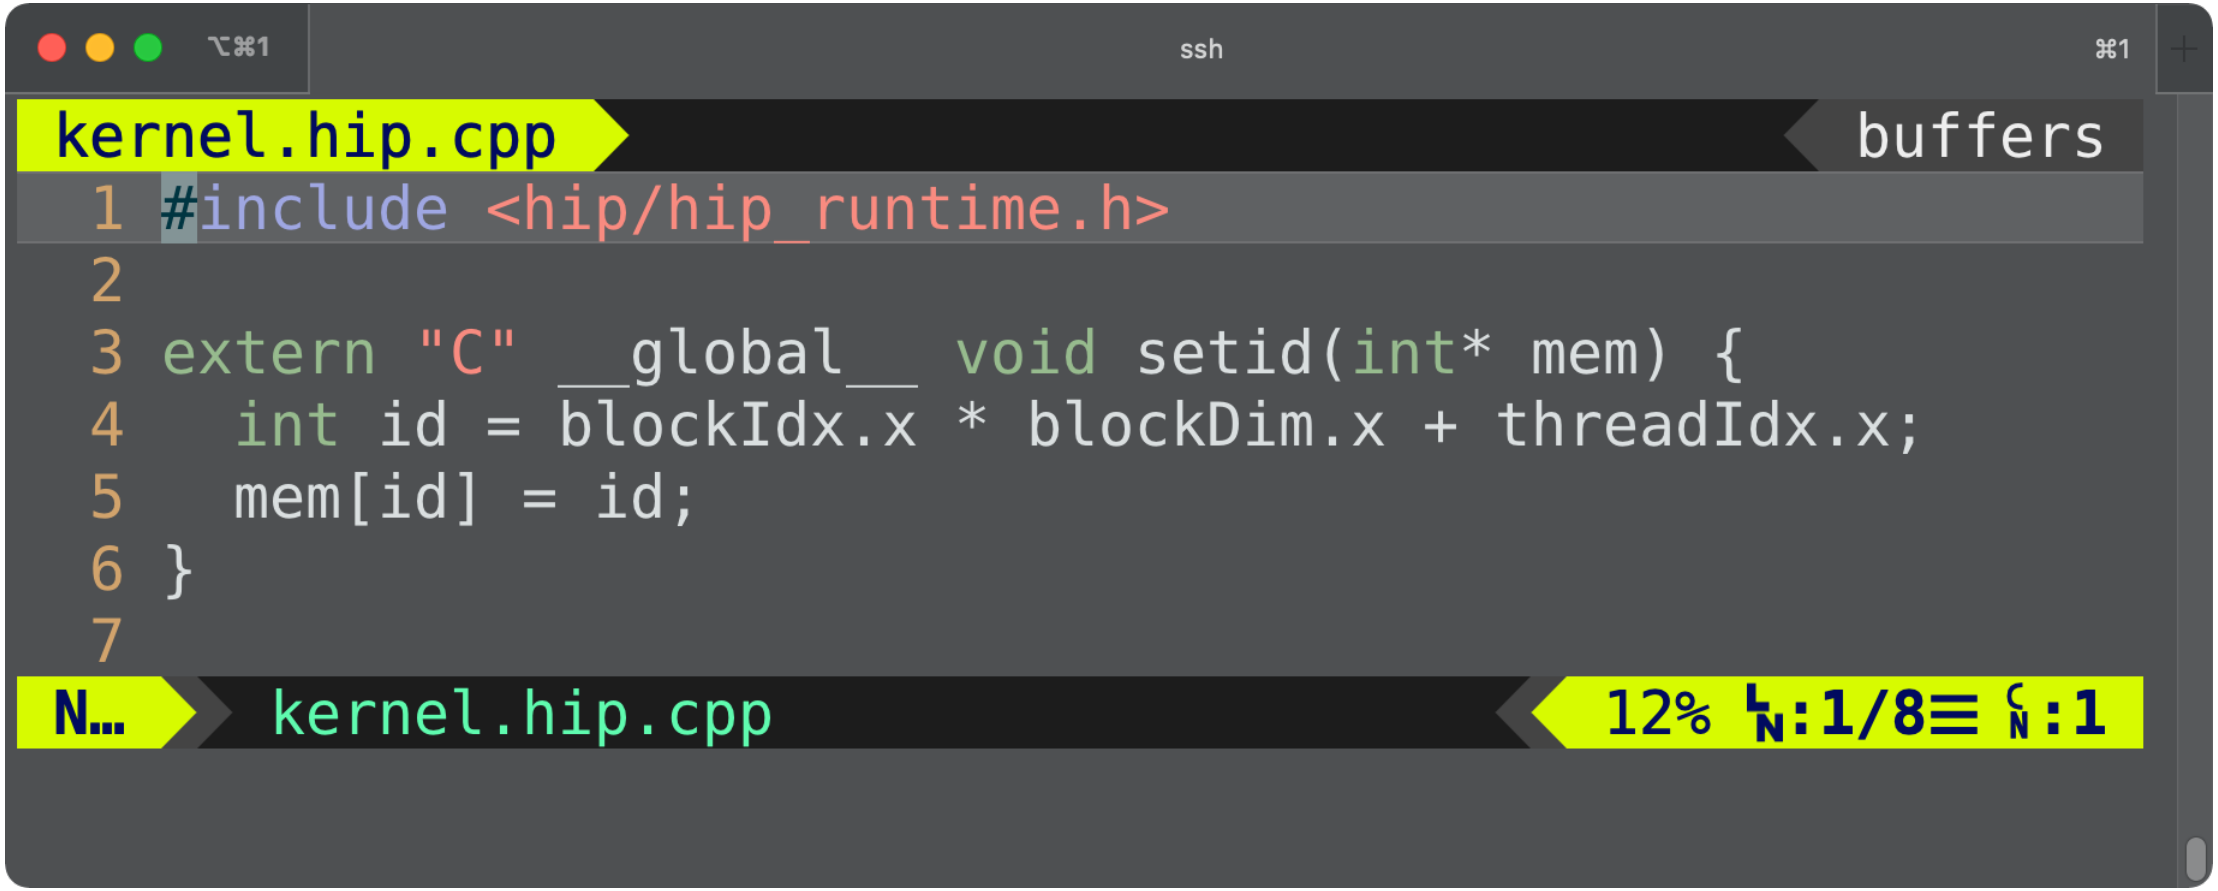
} /* namespace rt */
} /* namespace brisbane */
```

custom_policy/custom_policy.c

- iris_register_policy(
  shared_library_path,
  policy_name,
  init_params);

- iris_task_submit(…
  iris_custom,
  policy_name, …);

custom_policy/kernel.hip.cpp



custom_policy/custom_policy 8 → CPU

```
